Experience

Platform Engineer January 2026 – Present
American Family Insurance *United States*

- Developed Ansible and Python automations in Ansible Automation Platform (AAP) to provision multi-node database clusters on VMware vSphere, including SQL Server Always On and Oracle RAC, cutting build time by about 50%
- Replaced manual cluster setup steps, such as Infoblox IP reservations, Active Directory objects, and shared VMware disks between nodes, with end-to-end automated workflows
- Automated agent updates (e.g. Qualys, Cribl) across hundreds of Windows Server and RHEL servers spanning multiple Active Directory domains

Software Engineering Intern June 2025 – December 2025
Granite Telecommunications *United States*

- Built testing infrastructure that automates flashing images to Linux edge devices, orchestrate health checks, and run verification scripts to streamline device QA
- Added FastAPI endpoints for developers to access devices, run tests, and retrieve results remotely
- Worked on building an automated invoice processing pipeline using OCR and Gemini to extract, classify, and structure data from unstructured invoices from multiple vendors

Software Developer Intern December 2023 – February 2024
Intelligent Design Technology Limited *Hong Kong*

- Developed a prototype for human fall detection for a Raspberry PI based robot in Python using OpenCV and TensorFlow

Skills

Languages: Python, Go, Bash, SQL
Tools: Git, Ansible, Terraform, Docker
Cloud: AWS (EC2, S3, IAM, VPC, Lambda)

Certifications

- AWS Certified Solutions Architect (SAA-C03)
- Red Hat Certified System Administrator (RHCSA)

Personal Projects

Homelab *jyyhomelab.com*
Linux, Docker, Ansible, Terraform

- Built and managed a setup of servers and network equipment for experimenting and self-hosting services
- Utilized Proxmox for virtualization, OPNsense for network management, and Terraform and Ansible for infrastructure as code and configuration management

Serverless Face Blurrer
React, Python, Lambda, DynamoDB, S3, Rekognition, Terraform

- Developed a full-stack application that automatically blurs faces in images uploaded to an S3 bucket with job queues stored in DynamoDB
- Frontend built with React and backend built with Python using AWS Lambda and Rekognition, SQS for job queuing
- Deployed the application using Terraform with CI/CD implemented with Github Actions

Education

Boston University September 2024 – May 2027
Master of Science in Computer Science *United States*

Hong Kong University of Science and Technology September 2020 – June 2024
Bachelor of Engineering in Electronic Engineering *Hong Kong*
