Experience

Platform Engineer January 2026 – Present
American Family Insurance *United States*

- Automated provisioning of multi-node database clusters (SQL Server Always On, Oracle RAC) on VMware vSphere with Ansible and Python in Ansible Automation Platform (AAP), replacing manual DNS and IP requests, Active Directory setup, and shared disk configuration to cut cluster delivery from several days to the same day
- Converted AAP job, workflow, and input form definitions that were previously hand-edited in the web UI into configuration as code in Git, with drift detection against the live platform and automated syncing of form options from ServiceNow APIs
- Built scheduled end-to-end test builds of the server provisioning pipeline across different domains, operating systems, and networks to catch regressions before users do
- Developed a Python audit tool that reconciles DNS and IP data across two Infoblox grids and vSphere, flagging over 50 unreserved IP addresses at risk of conflicts

Software Engineering Intern June 2025 – December 2025
Granite Telecommunications *United States*

- Built testing infrastructure that automates flashing images to Linux edge devices, orchestrate health checks, and run verification scripts to streamline device QA
- Added FastAPI endpoints for developers to access devices, run tests, and retrieve results remotely
- Worked on building an automated invoice processing pipeline using OCR and Gemini to extract, classify, and structure data from unstructured invoices from multiple vendors

Software Developer Intern December 2023 – February 2024
Intelligent Design Technology Limited *Hong Kong*

- Developed a prototype for human fall detection for a Raspberry PI based robot in Python using OpenCV and TensorFlow

Skills

Languages: Python, Go, Bash, SQL
Tools: Git, Ansible, Terraform, Docker
Cloud: AWS (EC2, S3, IAM, VPC, Lambda)
Certifications: AWS Certified Solutions Architect (SAA-C03), Red Hat Certified System Administrator (RHCSA)

Personal Projects

Homelab *jyyhomelab.com*
Linux, Docker, Ansible, Terraform

- Built and managed a setup of servers and network equipment for experimenting and self-hosting services
- Utilized Proxmox for virtualization, OPNsense for network management, and Terraform and Ansible for infrastructure as code and configuration management

Serverless Face Blurrer
React, Python, Lambda, DynamoDB, S3, Rekognition, Terraform

- Developed a full-stack application that automatically blurs faces in images uploaded to an S3 bucket with job queues stored in DynamoDB
- Frontend built with React and backend built with Python using AWS Lambda and Rekognition, SQS for job queuing
- Deployed the application using Terraform with CI/CD implemented with Github Actions

Education

Boston University September 2024 – May 2027
Master of Science in Computer Science (Part-time) *United States*

Hong Kong University of Science and Technology September 2020 – June 2024
Bachelor of Engineering in Electronic Engineering *Hong Kong*
